SUMMARY

CS undergraduate with hands-on DevOps/MLOps experience (CI/CD, containerization, Kubernetes) and applied AI engineering (LangChain, RAG, multi-agent pipelines). 1st-place hackathon winner (160+ teams) with a track record of shipping production pipelines and AI-driven platforms.

EDUCATION

National University of Sciences & Technology (NUST), SEECS
BS Computer Science; CGPA: 3.78/4.0 – 6th Semester

Islamabad, Pakistan
2023 – Present

EXPERIENCE

DevOps Engineer Intern

Jun 2026 – Present

Systems Limited

Islamabad, Pakistan

- Built CI/CD pipelines in Azure DevOps Server across a two-VM setup (Windows: Azure DevOps Server; Linux: Docker/Jenkins), shipping FastAPI and Node.js microservices via Release/Deployment Group jobs with systemd-managed persistence.
- Configured Jenkins (Java 21) on Linux with Git/Pipeline plugins, integrating it with Azure DevOps Server repos over a shared Azure VNet to run Jenkinsfile-based CI for production services.
- Currently deploying and operating containerized workloads on Kubernetes (Minikube) – pods, deployments, services – as part of a structured mentor-led DevOps roadmap.

Software Engineer

Jul 2025 – Nov 2025

Corzly

Remote, USA

- Built automated data pipelines integrating PriceLabs & Hostaway for rental pricing and reporting, and implemented date-based algorithmic pricing overrides to optimize revenue and occupancy.
- Migrated analytics dashboards from Google Sheets to Supabase, adding audit logs and automated financial reporting to cut manual reconciliation effort.

Software Engineering Intern

Jun 2025 – Aug 2025

Alfabolt

Islamabad, Pakistan

- Built web applications and data interfaces with Next.js/React and Supabase for the "Zencodeo" code-sharing platform, and integrated an embeddings-based RAG chatbot.

PROJECTS

Bideez – Multi-Agent RFP Pipeline | 1st Place, CUST Hackathon 2026 (160+ teams)

2026

- Designed a multi-agent pipeline that ingests RFP documents and autonomously drafts compliant, structured proposal responses, coordinating specialized agents for parsing, requirement extraction, and drafting.

CareerPrep – AI Career Platform | 1st Place Hackathon Winner

2025

- Built a FastAPI backend using Groq LLM for resume parsing, skill extraction, AI job-matching, and a voice-based mock interview assistant, backed by Supabase.

RideTogether – NUST Carpooling Platform | React, Node.js, MongoDB, JWT

2025

- Built a student carpooling platform with real-time ride discovery and location-based matching, deployed on Vercel (frontend) and Railway (backend).

TECHNICAL SKILLS

DevOps/Infra: Azure DevOps Server, Jenkins, Docker, Kubernetes (Minikube), systemd, Git, Linux

Languages: Python, C++, JavaScript, SQL

AI/ML & LLMs: LangChain, RAG, Pinecone, Embeddings, vLLM, Hugging Face Transformers, Scikit-learn, XGBoost

Backend & Data: FastAPI, Node.js, REST, Supabase (PostgreSQL), MongoDB

ACHIEVEMENTS & LEADERSHIP

1st Place – CUST Hackathon 2026 (160+ teams), Bideez | 1st Place – Soventure Web Dev Hackathon (30+ teams)

Dean's Honor List – 4 semesters, NUST | Captain, SEECS Football Team
